Demographic Change in Rural Egypt, 1882-1917

- Population of *Mudiriya*, *Markaz* and *Madina* -

Hirofumi TANADA

1. Demographic Study of '*Markaz*' in Rural Egypt

The analytical study of '*markaz*' region (local administrative sub-unit; county) and '*madina*' (principal town of '*markaz*' ; town) have been strangely neglected by students of Egyptian area studies. This paper is intended as a preliminary investigation of population census data for *markaz* regions from 1882 to 1917. The point I want to show is demographic change in rural Egypt in terms of *markaz* population structure during this period. We are not concerned here with 'Governorate' regions, i.e. urban centers such as Cairo, Alexandria and Canal (including Port Said, Ismailia, Damietta and Suez).

Table 1. Population of Egypt by census, 1882-1917

<u>Year</u>	<u>Population</u>	<u>Annual increase rate</u>
1882	6,806,381	
1897	9,734,405	2.40%
1907	11,189,978	1.42%
1917	12,718,255	1.29%

source: published census for each year listed at the end of this paper

First of all, I show changes of total population counted by census in 19th and early 20th century presented in Table 1. The total population according to the first modern census of Egypt in 1882 was 6,806,381. Taking the annual rate of increase of total population and social conditions during the period above into

consideration, we can say that the census data of 1882 is not fully reliable. However, we will use the data as it is for our analysis in this paper, because our concern is to examine various ratios calculated from the census data and to show changes in population structure in rural Egypt. Four censuses, as indicated in Table 2, have been utilized for the analysis in this paper.

Table 2. Census (day/month/year) and director of census.

1882	3rd May 1882	Signor F. Amici Bey
1897	1st June 1897	A. Boinet Pasha
1907	29th April 1907	C. C. Lowis of the India Civil Service
1917	7th March 1917	J. I. Craig (later I. G. Levi)

source: published census for each year listed at the end of this paper

2. Data Set

During the period of 1882-1917, we can observe 14 *mudiriya* (local administrative unit; province) in Egypt except *muhafaza* ' (Governorate; Urban and Frontier Administrative Unit, i.e. Cairo, Alexandria, Suez and Frontier Districts). Namely, the number of *mudiriya* remained the same between 1882 and 1917. The number of 'Markaz' in each census is different, that is, 73 in 1882, 81 in 1897, 84 in 1907 and 94 in 1917. Table 3 shows the names of each *markaz* and *madina* (the main town of *markaz*), and shows the number of villages belonging to each *markaz*.

Let us start with describing details of the data set that we will use in the following analysis of *markaz* population. Configurations of primary and secondary data set for each census are as follows. The primary data set consists of original figures selected from each census report. The secondary data set

consists of original figures and ratios calculated by the author.

(1) 1882 census (there are 73 *markaz* in this year.)

The following items are extracted from the census data as follows.

- ①Fixed residents of Egyptians; male and female
- ②Semi-fixed residents of Egyptians; male and female
- ③Foreign residents; male and female
- ④Total residents; male, female, and total

Nine data items are compiled for each *markaz*, but only three are compiled for *madina* and villages, i.e. "total residents; male, female, and total" in the census. Therefore, I made a primary data set for each *markaz* consisting of 15 items including data of *markaz*, *madina*, and villages. The primary data set is shown in Appendix 1-1.

For regional analysis of *markaz*, we have made a secondary data set consisting of the following items. These are ①population of *markaz*, ②population of *madina* (center of *markaz*), ③proportion of *madina* population to *markaz* population, ④sex ratio in *markaz*, ⑤fixed resident ratio (Egyptians), ⑥semi-fixed resident ratio (Egyptians), ⑦foreign resident ratio, ⑧sex ratio in *madina*, ⑨sex ratio in villages (Appendix 1-2.)

(2) 1897 census (There are 81 *markaz* in this year.)

Data for 64 items are observed in the census for each *markaz*, each *madina*, and each village. 17 items are extracted from the data as follows:

- ①Total residents; male, female, and total
- ②Housing
- ③Egyptians total
- ④Foreigners total
- ⑤Muslim total
- ⑥Christian total
- ⑦Jewish total

- ⑧Able to read and write; male and female
- ⑨Illiterate; male and female
- ⑩With occupation; male and female
- ⑪Without occupation; male and female

I have made a primary data set for each *markaz* consisting of 51 items including data of *markaz*, *madina*, and villages. Figures of primary data set are shown in Appendix 2-1.

Same as for 1882 census, I have made a secondary data set consisting of the following items. These are ①population of *markaz*, ②population of *madina*, ③proportion of *madina* population to *markaz* population, ④sex ratio in *markaz*, ⑤foreign resident ratio, ⑥Christian resident ratio, ⑦Jew resident ratio, ⑧male, literate ratio, ⑨male, working population ratio, ⑩sex ratio in *madina*, ⑪*madina*, foreign resident ratio, ⑫*madina*, Muslim resident ratio, ⑬*madina*, male, working population ratio, ⑭sex ratio in villages (Appendix 2-2).

(3) 1907 census (there are 84 *markaz* in this year.)

Following 19 items are extracted from the census data for each *markaz*, each *madina*, and each village.

- ①Total of occupied houses
- ②Total population ; male, female, and total
- ③Literate; male and female
- ④Muslim total
- ⑤Copts; Orthodox, Catholic, Protestant and total
- ⑥Other Christians; Roman Catholic, Protestant, Greek Orthodox, Eastern Christian, and total
- ⑦Jews total
- ⑧Other religion total
- ⑨Badawi(Bedouin) total

I have made a primary data set for each *markaz* consisting of 57 items including data of *markaz*, *madina*, and villages. Figures for the primary data set are shown in Appendix 3-1.

②①Blindness/one eye/both eyes; male, female and total

For regional analysis of *markaz*, I have made a secondary data set consisting of following items. These are ①population of *markaz*, ②population of *madina*, ③proportion of *madina* population to *markaz* population, ④sex ratio in *markaz*, ⑤Christian (including Coptic resident) resident ratio, ⑥Jewish resident ratio, ⑦male, single ratio, ⑧male, literate ratio, ⑨sex ratio in *madina*, ⑩*madina*, male, single ratio, ⑪*madina*, male, literate ratio, ⑫*madina*, Muslim resident ratio, ⑬sex ratio in villages (Appendix 4-2).

3. *Madina in Markaz*

We will begin with a simple observation of basic census data related to social change in Egypt. Table 4 shows "Towns of over 10,000 inhabitants and important towns" with their annual rate of population increase and ratio of towns' population to total population. The proportion of the town population rises a little from 1882 to 1897, but the proportion holds steady from 1897 to 1917. The proportion of urban and rural population during this period was stable and there was no drastic change in population structure in terms of urban and rural distribution.

However, the annual rates of increase for individual towns are different during this period. Regarding the period from 1882 to 1897, major principal towns such as Cairo, Port Said, Ismailia, Suez, Zaqqiq, Tanta, Beni Suef, Minya, Qena, Aswan and so on show high annual rates of increase compared to that of the total population, i.e. 2.40%. The growth of these major towns is remarkable during this period.

As for the period from 1897 to 1907, in addition to a few major towns such as Port Said, Ismailia, Damamhur and Beni Suef, medium sized towns such as Rosetta, Bilbeis, Mit Gamar, Disuq, Ashmun, Tala, Mellawi, Suhaj, Isna, Aqsar and Idfu show relatively high annual rates of increase compared to that of the total

For regional analysis of *markaz*, we have made a secondary data set consisting of the following items. These are ①population of *markaz*, ②population of *madina*, ③proportion of *madina* population to *markaz* population, ④sex ratio in *markaz*, ⑤male, literate ratio, ⑥coptic resident ratio, ⑦Christian resident ratio, ⑧Jew resident ratio, ⑨bedouin population ratio, ⑩sex ratio in *madina*, ⑪*madina*, male, literate ratio, ⑫*madina*, Muslim resident ratio, ⑬sex ratio in villages (Appendix 3-2).

(4) 1917 census (there are 94 *markaz* in this year.)

The following 20 items (each item regarding population has male, female and total) are extracted from the census data with items of information about area and density for each *markaz*, each *madina*, and each village. The figures of the primary data set are shown in Appendix 4-1.

- ①Area in square kilometers
- ②Population per square kilometers
- ③Number of occupied housing
- ④Population; male, female and total
- ⑤Muslim; male, female and total
- ⑥Christian Orthodox; male, female and total
- ⑦Christian Catholic; male, female and total
- ⑧Protestant; male, female and total
- ⑨Other Christian; male, female and total
- ⑩Total Christian; male, female and total
- ⑪Jewish; male, female and total
- ⑫Non stated and other religion and sects; male, female and total
- ⑬Single; male, female and total
- ⑭Married; male, female and total
- ⑮Divorced; male, female and total
- ⑯Widowed; male, female and total
- ⑰Civil status/not stated; male, female and total
- ⑱Literate; male, female and total
- ⑲Illiterate; male, female and total

source: published census for each year listed at the end of this paper

* Towns (center of Markaz) of 10,000 inhabitants and more at the time of each census and principal towns selected by Baer, G. (1969)

** Abbreviation of names for Governorates and Mudiiriyas

*** Rural Town...Center of markaz for 14 mudiiriya. In 1907, Damietta was the center of markaz of mudiiriya Daqahliya.

**** Rosetta was a Governorate in 1882.

*1 figure from 1897 census (Tome Premier p.xxxviii)

*2 figure from 1897 census (Tome Premier p.xxxvi)

*3 figure from 1897 census (Tome Premier p.xxxviii)

*4 figure from 1897 census (Tome Premier p.xxxviii)

*5 population in 1907 was 6,855

*6 not the center of markaz in 1907

*7 not the center of markaz in 1917. A part of Alexandria.

*8 not the center of markaz in 1917

population, i.e. 1.42%. These medium sized towns grew very rapidly during this period.

With regard to the period from 1907 to 1917, most of the major and medium sized towns in Lower Egypt and Middle Egypt including *mudiriya* Beni Suef, Faiyum, Minya and Asyut, show relatively high annual rates of increase compared to that of the total population, i.e. 1.29%. The growth of most of the major and medium sized principal towns in Lower and Middle Egypt is remarkable during this period. We can say that there was a certain amount of dynamic change for individual towns in terms of mobility of the regional population by 1917.

4. *Markaz* population in transition: 1882-1917

Next, we will examine the status of 14 *mudiriya* and all of the *markaz* in order to observe social change in the period 1882-1917. First, I will examine the figures of the secondary data set for all *markaz* from 1882 to 1917 as shown in Table 5. I can say that there was a stable increase of the total *markaz* population and a lopsided increase of the *madina* and/or villages populations. The ratios of literate male and Christian residents (including Coptic residents) increased steadily from 1897 to 1917. The Muslim resident ratio in *madina* decreased gradually from 1897 to 1917.

Table 6 shows the comparison of selective secondary data of 14 *mudiriya* and also changes of selective secondary data for each *mudiriya* from 1882 to 1917. We will examine whether there are specific characteristics for individual *mudiriya* in terms of population increase, *madina* population, sex ratios, literate ratio, and Christian and Muslim population.

With regard to changes of population for *markaz*, *madina* and villages from 1882 to 1917, we can observe marked change in terms of annual rate of increase for *mudiriya* Buheira, Sharqiya, Faiyum and Miniya. In addition, regarding Faiyum and Miniya, there are specific sex ratio in *madina*. Namely, the sex ratios in *madina* are relatively lower than those of villages during the period.

Table 5. Secondary Data for Mudiriyas, 1882-1917

Also, we can see the same pattern of sex ratio for *mudiriya* Asyut. Regarding the Christian resident ratio, we can observe relatively high rates for *mudiriya* Minya, Asyut and Jirja.

Taking all of the figures in Table 6 into consideration, I can summarize that some *mudiriyas* in Lower Egypt and Middle Egypt were growing rapidly and *mudiriyas* in Upper Egypt were relatively stable in terms of population increase.

In accordance with the above results, we select two *mudiriyas*, Sharqiya and Faiyum, where we can see rapid population growth in the period. Regarding these two *mudiriyas*, there are the same number of *markaz* from 1882 to 1917, so it is easy to examine and show the changes during this period. We will examine secondary data of each *markaz*, and Table 7 shows changes of each *markaz* population. It seems that there are various differences in terms of growth and index for each *markaz*. Regarding these differences, we will examine further by the method of multi-variate analysis.

We conclude this paper with indicating the status of demographic change in rural Egypt as follows.

(1) There was a certain amount of dynamic change for individual towns in terms of mobility of regional population by 1917.

(2) There was stable increase of total *markaz* population and lopsided increase of *madina* and/or village population.

(3) Some *mudiriyas* in Lower Egypt and Middle Egypt were growing rapidly and *mudiriyas* in Upper Egypt are relatively stable in terms of population increase.

(4) It seems that there are various differences in terms of growth and index for each *markaz*.

Table 7. Markaz in Sharqiya & Faiyum, 1882-1917

Note:

As a rule, we don't make any adjustment of population figures. We make use of figures in census as they are. We don't take any geographical change of area into consideration.

Table 3.

(1) Nijila in *mudiriya* Buhaira is an old name of Kom Hamada. Ramzii, Muhammad *Al-qaamuus al-jighraafii*, v.2-2, 1958, p.339.

Table 7.

(*) The area of *markaz* Faiyum in 1882 is not the same as that in 1897, so the rate of population increase is rather high.

(**) The area of each *markaz* is rather different between 1882 and 1897, so we don't indicate the figures for 1882.

Appendix 2-1.

(*) The first one is the number of 'bourgades' and 'hameaux' (hamlets) and the second one is the number of military camps.

Appendix 4-1 & 4-2.

(1) Ushur Iskandariya, Mamuriyet Burullus and Helwan town are *markaz* without surrounding villages.
